Chief Information Officer

What does an August eTech Chief Information Officer do? We come along side your company and help you navigate technology so that you can achieve your business goals efficiently. We will discuss and help you discern strategic goals, look at your current technology and work to keep your budget in line and at the forefront of each solution.

A CIO needs business skills as well as technical skills. Effective CIOs not only have the ability to dramatically re-engineer business processes, they also have the leadership skills required to convince others that change is necessary.

To figure out how IT can generate business value, CIOs must grasp and quickly respond to a number of market forces, including innovations in technology, vendor product offerings, disruptive technology and, increasingly, a customer base that expects to do business across physical and virtual channels.

CIO & MSP Consulting

MSP Service Features and Benefits
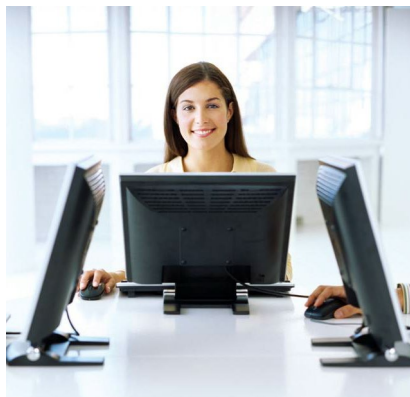

Welcome to August eTech! For almost 20 years, our team has facilitated individual solutions and created strategic teams of highly qualified personnel to do one thing: make businesses work. August eTech clients are provided with customized hands-on personal service for their IT needs, and our work has and always will extend into advice and support for optimal performance.

Established in August of 2001, August eTech was created to serve the void in IT consulting where small- to medium- sized organizations fall. We strive to be an affordable, freestanding IT department within companies that don't have the staff or budget for one. For the price of one in-house full-time IT employee, you can have the team at August eTech behind you with data security experts, desktop techs, firewall techs, network engineers, and much more. August eTech services include desktop, server, network monitoring, and support. August eTech becomes more than a solution—we become your partner. Providing solutions before a problem even arises reinforces our commitment to be a full-fledged member of your team. Make no mistake: we operate with your best interest in mind, and we always will.
